

## Press release Calendar Week 29/I

### Safety first – Axle Stands by Rameder

#### The perfect accessory for safe and convenient car repairs

Lowering cars remains popular among professional and hobby gearheads. However, garages of all types raise cars much more frequently – since mechanics want to work safely and comfortably under the car. Extremely solid axle stands by **Rameder** with a weight-bearing capacity of up to 2000 kilogrammes are the perfect accessory for anyone who has to perform any kind of work on the underbody or the wheels of a car. Price per item at [www.rameder.eu](http://www.rameder.eu): only EUR 12.99.

Of course, the axle stands from the vast accessory programme of **Rameder** are TÜV/GS-certified [German Association for Technical Inspection]. The stands can be adjusted from 26.5 to 42 cm and the handling is extremely simple due to the automatic locking mechanism. The durable construction with extra-large pedestal feet ensures stability. Clever gearheads order at least two to increase the stability of the elevated vehicle.

By the way: These axle stands are also an extremely useful accessory for your garage at home when changing from summer to winter tires or vice versa.
